ComfyUI in a Box

Private generative design for brands and manufacturers.

ComfyUI in a box: a private design studio for on-brand imagery.

Generative image tools can take a designer from idea to visual in minutes. For brands and manufacturers, the obstacle is not capability but control: unreleased collections, prints and packaging should not be uploaded to public services with unclear data handling and rights.

A private image studio, built on the open-source ComfyUI engine and delivered as an appliance, gives design teams the same speed on hardware the company owns. Templates make it usable on day one, node workflows give experts full control, and style adapters trained on your own designs keep outputs on-brand.

Key takeaways

- ✓ Speed without leakage: prompts, sketches and outputs never leave your appliance.
- ✓ Usable by everyone: templates for common jobs, the full node editor for experts.
- ✓ On-brand and licensed: private style training and curated models suited to commercial use.

This paper explains how the Private Image Generation Studio works, the controls that keep data private, where it delivers value first, and how to evaluate and roll it out.

Your designs are your IP. Public image tools are not the place for them.

Uploading unreleased collections, prints or packaging to public image generators risks leaks and unclear rights. Designers still want the speed of generative tools. A private studio gives them that speed on hardware you own.

- ✓ Sampling and photo shoots make early design exploration slow and expensive.
- ✓ Designers already use public image tools, risking leaks of unreleased work.
- ✓ Model licences vary widely, and some prohibit commercial use.
- ✓ Results from generic tools drift away from the brand's visual identity.

Illustration • Illustrative outputs: print directions explored before a single sample is made.

From request to result, inside your walls.

ComfyUI, the open-source node-based engine for image and video generation, with curated open models and Logic Sonata templates, configured and supported on your appliance.

- 01 **Choose a template or workflow**
Start from a prepared template or open the full ComfyUI canvas.
- 02 **Add prompt, sketch or reference**
Describe the result, upload a sketch or point to a reference image.
- 03 **Generate on the appliance**
Images render locally on your GPU, typically in seconds.
- 04 **Refine**
Iterate with variations, edits and upscaling until it is right.
- 05 **Export**
Download to your design tools or share with your team.

What the Private Image Generation Studio does.

Node-based workflows

Full creative control with ComfyUI graphs for power users and technical artists.

One-click templates

Prepared workflows for common jobs, so non-technical staff get results without touching nodes.

Sketch and reference control

Turn line sketches, mood images and existing products into guided renders.

Your brand, trained privately

Fine-tune style adapters on your own designs, on your own hardware.

Edit, extend and upscale

Inpainting, background replacement, variations and high-resolution upscaling.

Curated, licensed models

Models selected for quality and licence terms that suit commercial use.

Built on proven open foundations

ComfyUI, the open-source node-based engine for image and video generation, with curated open models and Logic Sonata templates, configured and supported on your appliance.

Controls built in, not bolted on.

Every Logic Sonata system runs on infrastructure you control. Data boundaries, access and audit are designed in from the start rather than added later.

- ✓ Prompts, uploads and outputs stay on your appliance
- ✓ Style adapters trained on your hardware only
- ✓ Model licences reviewed for your intended use
- ✓ User accounts and access control
- ✓ Version-controlled workflows and templates
- ✓ No telemetry to external services

Data boundary

Prompts, documents, images and results are processed on your appliance or dedicated private infrastructure. They are not sent to public AI services and are never used to train third-party models.

Templates your designers use on day one.

Each template is a tested ComfyUI workflow wrapped in a simple form, so the team gets consistent results without learning the node editor.

Print explorer

Prompt plus mood image to a grid of textile print directions, ready for colourways.

Sketch to render

A line sketch of a garment or product becomes a photoreal concept render.

Colourway generator

Recolour an approved design into seasonal palettes while keeping the pattern intact.

Product on background

Place a product photo into clean studio or lifestyle scenes for e-commerce.

Where it pays off first.

Textile prints and colourways

Explore print directions and recolour them in minutes before sampling.

Product and packaging concepts

Visualise new products and packs early, without a photo shoot.

Lookbooks and campaigns

On-brand imagery for seasonal launches and social content.

E-commerce variants

Consistent backgrounds, colour variants and lifestyle scenes at scale.

Mood boards

Rapid visual directions for buyers and internal reviews.

Buyer presentations

Show customers options quickly, from your own secure studio.

Measuring the pilot

We agree success measures before the pilot starts. Typical measures include:

- ✓ Time from brief to first visual direction
- ✓ Number of print or concept options explored per brief
- ✓ Physical samples avoided in early rounds
- ✓ Designer adoption and satisfaction

Deploy where your data needs to live.

On-premise

Dedicated hardware inside your building for the most sensitive data. Nothing leaves your network.

Hosted private

Dedicated capacity on managed private GPU infrastructure, isolated from public AI services. No hardware purchase.

Hybrid

Sensitive workloads on-site, everything else hosted, under one set of policies and one audit trail.

Hardware, sized to the workload

Logic Sonata is hardware-neutral. Smaller teams often start with a compact AI workstation such as NVIDIA DGX Spark or an AMD Ryzen AI Max+ system, both with up to 128 GB of unified memory in a desktop-sized unit. Larger rollouts use multi-GPU servers or a private cloud cluster.

A proven rollout path

Assess

Review current AI use, data exposure and priority use cases. Deliver a 30/60/90-day roadmap.

Pilot

Deploy one working use case with real users and agreed success measures.

Roll out

Extend to more teams with governance, integration and role-based training.

Manage

Monitoring, model updates, knowledge refreshes and quarterly reviews.

One partner is accountable for the whole stack: hardware, software and models, your company knowledge, access controls, implementation, training and ongoing support.

Questions to ask any vendor.

Use this checklist when comparing options, including ours.

- ☐ Where are prompts, uploads and outputs stored, and is any telemetry sent externally?
- ☐ Are the included models licensed for our intended commercial use?
- ☐ Can we train style adapters on our own designs, on our own hardware?
- ☐ Are there templates non-technical staff can use without learning node graphs?
- ☐ How are workflows versioned and shared across the team?
- ☐ Who can access the studio, and is usage logged?

Frequently asked questions

Do designers need to learn ComfyUI?

No. Templates cover common jobs with a simple form. Technical artists can open the full node editor when they want more control.

Can it learn our brand style?

Yes. We can train style adapters on your approved designs, on your hardware, so outputs stay consistent with your brand.

Who owns the images?

You control everything the studio produces. We select models whose licences suit commercial use and review terms with you.

Private AI, built inside your walls.

Logic Sonata delivers secure private AI for businesses in Singapore, Vietnam, Indonesia, Malaysia and Thailand. Each solution combines hardware, software, company knowledge, access controls, implementation, training and ongoing support, deployed on-premise, hosted or hybrid.

Our product portfolio: Private Knowledge Assistant, Private Vision Intelligence, Private Coding Assistant, Private AI Agent Platform and Private Image Generation Studio.

Next step: a 30-minute consultation

We will show the Private Image Generation Studio working, discuss your data and requirements, and scope a pilot around your use case.
